

1. Server URL or IP - 54.241.42.128
2. SSH username - Ubuntu
3. SSH password or key. - key is used and is available in credential folder

If a ssh key is used please upload the key to the credentials folder.

4. Database URL or IP and port used. - localhost:3000

NOTE this does not mean your database needs a public facing port. But knowing the IP and port number will help with SSH tunneling into the database. The default port is more than sufficient for this class.

5. Database username - csc648
6. Database password - Section3team4!
7. Database name (basically the name that contains all your tables) - csc648
8. Instructions on how to use the above information. -
Put the above IP in browser like this : <http://54.241.42.128/>
