1. Server URL or IP - 54.241.42.128
2. SSH username - ubuntu
3. SSH password or key - CSC_website.pem in credentials folder
4. Database URL or IP and port used. - URL: 127.0.0.1 port: 3306

   NOTE this does not mean your database needs a public facing port. But knowing the IP and port number will help with SSH tunneling into the database. The default port is more than sufficient for this class.

5. Database username - your_user
6. Database password - your_password
7. Database name (basically the name that contains all your tables) - tutor_database
8. To connect to the server, please make a new MySQL Workbench connection and input all the information accordingly. Instructions on how to use the above information. - Put the above IP in browser like this : http://54.241.42.128/
